

# Controls Are the Foundation of IQCP: A Small Price to Pay for Accurate Lab Results

## Quality Control Budget

Your IQCP plan consists of (1) Risk Assessment, (2) Quality Control Plan and (3) Quality Assessment. Microbiologics controls will help you reduce costs while achieving your IQCP goal of rapid, accurate results.

A small portion of your microbiology budget is spent on controls, yet they are the foundation of your IQCP plan. With exceptional microbiology controls you can reduce your risk and be confident in the accuracy of your test methods, materials reagents, equipment, personnel and results.

Quality microbiological controls can reduce the incidence of hospital acquired infections, shorten length of stay, and have positive impacts on rapid diagnosis and targeted therapy. The result will be superior patient care and reduced cost at your facility.

Microbiologics controls are easy to use and cost effective. Rapid PCR results can be trusted when our innovative molecular controls are used. QC results are in range the first time, avoiding repeat testing and delayed results. By incorporating our highly accredited and fully traceable quality control organisms into your laboratory testing, Microbiologics can help you ensure test accuracy.

At Microbiologics, we have a four-point commitment to a safer, healthier world:

1. The world's most trusted provider of biological controls
2. Customer-focused in product design and delivery
3. Caring and knowledgeable technical support and customer service at the ready
4. World-class expertise and excellence
